

Mirapoint Meets the Needs of Enterprises

Secure Messaging Simplified

MIRAPOINT APPLIANCES ARE THE IDEAL SOLUTION FOR ENTERPRISES LOOKING FOR RELIABLE, SCALABLE AND COST EFFECTIVE MESSAGING

INDUSTRY BRIEF | ENTERPRISE

- Field-proven 99.999% reliability prevents disruptions to business communications
- Purpose-built appliances optimize performance
- Hardened OS with no known exploits provides maximum security
- Simple management of multiple appliances through a single-console
- Supports mobile, standards-based and Outlook clients for multiple means of email access
- Easily scales to support growth while maintaining the industry's lowest TCO

Reliable, scalable and secure messaging is a must for Enterprises

Email is a mission-critical application for enterprises that need to maintain communication between employees, customers, and partners. With companies growing ever more geographically dispersed, the need for employees to stay in constant communication with each other is not a luxury - it is a business requirement. As today's enterprises spend 25-33% of their time using email for day-to-day communications, a dependable email system is crucial for employee productivity.

Central to deploying and maintaining a reliable, scalable email network is utilizing an easy-to-manage, extensible and scalable email solution. As their networking and security counterparts have done for years, email administrators are increasingly relying on next-generation email appliances to address these needs. Another key component of reliable email is security: the ability to protect the email network from unplanned downtime due to worms, viruses, hackers and other threats is critical.

Due to their heterogeneous user population, enterprises must also have a system capable of supporting multiple clients. Finally, in today's more regulated and litigious business world enterprises must have the ability to enforce and audit granular policies while ensuring key data is kept within the company while providing for rapid recovery and production of individual messages when needed.

Mirapoint appliances deliver comprehensive and cost effective email services

Mirapoint's email, email security, archiving and disaster recovery appliances are the building blocks of an "always on" messaging infrastructure. Integrated anti-virus and anti-spam functionality as well as automatic routing for encryption and authentication means security is part of the entire messaging network, not just at the network perimeter. To support a heterogeneous user population, Mirapoint supports standards-based email clients (IMAP/POP), mobile clients as well as Microsoft Outlook while also providing a sophisticated webmail client. Mirapoint also offers a simple appliance approach to discreetly archiving messages without disrupting users to meet compliance needs. A Mirapoint appliance-based Secure Messaging Infrastructure easily scales to meet the growing needs of even the largest enterprises while maintaining the lowest TCO in the messaging industry and providing a platform for the provisioning of new services.

Mirapoint Meets the Needs of Enterprises

Secure Messaging Simplified

Mirapoint solutions meet the demands of enterprises by providing:

- Proven 99.999% uptime reliability (less than 6 minutes of downtime per year)
- SMTP-layer edge blocking reducing unwanted message traffic by up to 80%
- Industry leading 98% spam catch-rates with virtually zero false positives
- Integrated day zero virus scanning technology
- Outbound content filtering for global policy enforcement and regulatory compliance
- Secure, hardened operating system with no known exploits for extra protection against hackers
- Sender authentication to assure messages from unauthorized sources never enter the network
- Standards-based architecture works with major email clients (Outlook, Eudora, Netscape, etc.), legacy email applications, directory servers and storage options
- Core collaborative services including calendaring, group scheduling, address book and to-do-lists
- Microsoft Outlook synchronization for mixed client environments
- Unobtrusive, appliance-based archiving of inbound and outbound messages
- Highly cost-effective, appliance-based business continuity that can be easily managed in-house
- Encrypted transmission of messages from client to the mail server

Integrated, Secure Messaging Appliances

Message Server. Mirapoint's appliance-based Message Server® provides 99.999% availability with exceptionally high performance. Users can access their email from any desktop via a secure, web-based interface, or via any standards-based email client including Outlook.

In addition to its email functionality, the Message Server also provides easy-to-use collaboration tools, including group calendaring, scheduling and address book.

RazorGate. Mirapoint's RazorGate® appliance is an award-winning security appliance that incorporates everything you need to ensure the security of your email network. It blocks spam, protects against viruses, and filters content for both inbound and outbound messages. RazorGate is also a powerful router that can be used as a front-end to integrate heterogeneous email systems.

Directory Server. The Mirapoint Directory Server appliance is the industry's first high-performance appliance providing unified user and system management. With proven scalability to millions of entries, the Mirapoint Directory Server simplifies the creation, use and integration of LDAP directories as a common information database for all messaging and related applications. Like the RazorGate and Message Server appliances, the Directory Server is also fully compatible with other directory products, including Active Directory.

ComplianceVault. The ComplianceVault™ from Mirapoint, when functioning with the Mirapoint Message Server and RazorGate appliances, passively and discreetly copies all messages sent or received within an organization, indexes the messages and places them into a permanent archive. The message archive is backed up securely to tape and then deleted from the originating journal mailbox.

Messaging Reporter. The Mirapoint Messaging Reporter is a valuable reporting tool that delivers a holistic view of spam, virus, and email trends across the messaging network while also providing forensics capabilities. The Messaging Reporter simplifies the manual process of aggregating and analyzing security and traffic data contained in log files from any number of devices - including firewall and email security devices as well as mail servers - allowing administrators to mine data from any given period of time for up to ten years.

Mirapoint serves and secures over 115 million mailboxes worldwide. Here are a few of our successes in the enterprise industry:
