

Mirapoint Message Server

MIRAPOINT SIMPLIFIES MESSAGING WITH A SCALABLE APPLIANCE-BASED PLATFORM THAT DELIVERS CARRIER-GRADE RELIABILITY AND THE INDUSTRY'S LOWEST TCO

APPLIANCE BENEFITS

- All in one messaging, collaboration and security
- Deploys in minutes with no additional hidden costs
- No Known Exploits -- A hardened Messaging Operating System™ (MOS) optimized for performance, security and reliability provides unrivalled peace of mind.
- Supports hundreds of thousands of users
- Auto-updates in minutes with no downtime
- Controls spiraling email infrastructure costs

THE CHALLENGE

The complexity of providing email has dramatically increased. Now, in addition to building a secure messaging infrastructure capable of handling millions of messages, IT managers must also offer advanced services such as group calendaring, address book, webmail and mobile access – all while staying within rigorous financial guidelines.

THE MIRAPOINT SOLUTION

The Mirapoint Message Server™ is the industry's most reliable email server. Based on an open-standards platform, this appliance dramatically lowers complexity, reduces the administrative load and easily scales to meet the most demanding business needs. Plus, Message Server includes collaboration features demanded in today's distributed organizations.

FEATURES AND BENEFITS

Lowers Complexity

Installed in minutes, Mirapoint's Message Server 600 and 6000 series is a true "set and forget" solution for the busy IT administrator, replacing multiple Windows servers and reducing the resources required to manage your messaging network.

Industry's Lowest TCO

Message Server offers TCO many times lower than any application-based messaging product. This translates to significant savings in administration, management, and licensing costs.

Scalable

Message Server can scale as your business grows to handle the most demanding messaging environments including global organizations with hundreds of thousands of employees.

Reduced Downtime and Improved Productivity

Field-proven 99.999% reliability equates to less than six minutes of unscheduled downtime per year. And, Message Server's sophisticated SAN architecture allows for N+1 redundancy across the entire fabric for support of mission critical messaging. When deployed with Geographic Mirroring -- the ability to back up different cities or regions -- Message Server enables 100% availability.

Enterprise Storage Capability

Message Server supports 8 Terabytes (TB) of addressable disk space per node to meet today's increasing demand for storage, and is scalable to 126 TB of disk storage in an N+1 scenario, suitable for the world's largest enterprises and Service Providers.

FEATURES AND BENEFITS continued...

Increased Security

Mirapoint Message Server's 600 and 6000 Series include a Multi-Layer security approach featuring:

- Multiple antivirus and antispam running simultaneously
- Support for SPF (Sender Policy Framework)
- Rich RBL (Real-time Blackhole) support and connection controls via Mailhurdle

Standards-based

Message Server supports all leading email clients as well as Internet standard protocols for easy integration with any client device.

Rich Messaging Services

Message Server offers rich mail, calendaring, group scheduling and address book as well as mobile client support.

MIRAPOINT'S MESSAGING SUITE

Message Server is part of a suite of solutions for enterprise messaging needs which includes:

- RazorGate, an appliance-based email security gateway
- RazorSafe, an email archiving appliance to meet regulatory compliance and e-discovery requirements.
- Mirapoint Messaging Reporter™, a reporting tool that delivers a holistic view of spam, virus, and email trends across the messaging network simplifying the manual process of aggregating and analyzing email security data.
