

# Mirapoint Messaging Reporter

## Centralized Management Reporting

MIRAPOINT DELIVERS PROVEN, APPLIANCE-BASED SOLUTIONS WITH CARRIER GRADE RELIABILITY TO BUILD A SECURE MESSAGING INFRASTRUCTURE WITH CENTRALIZED CONTROL AND SIMPLIFIED MANAGEMENT – ALL AT A DRAMATICALLY LOWER COST.

PRODUCT DATA SHEET

- Improved insight into entire system for more effective network security management
- Forensic capabilities for tracing messages quickly and cost effectively
- Greater visibility into email volume and security trends for more efficient capacity planning
- Enhanced user demographics for better management and cost-effective operation
- Automated delivery of report data in seconds for improved efficiency

### The Challenge

The **Mirapoint Messaging Reporter™** is a valuable reporting tool that delivers a holistic view of spam, virus, and email trends across the messaging network. The Messaging Reporter simplifies the manual process of aggregating and analyzing security and traffic data contained in log files from two or more devices – including edge firewall, and email security devices as well as mail servers – allowing administrators to mine data from any given period of time for up to ten years. The Messaging Reporter provides automated, centralized reporting of current and long-term historical activity, enabling true visibility into email traffic and security trends, and allowing administrators to more effectively plan and allocate resources.

### Features and Benefits

#### Security Effectiveness

The Messaging Reporter provides quantitative information about the effectiveness of the security infrastructure in managing viruses, spam, and other types of malicious activities. This near real-time view into the email network means administrators never have to wonder whether their email security system is performing adequately.

#### Forensics

The Messaging Reporter can identify, search for, and gather messages based on their characteristics, such as date, sender, recipient, or subject, in response to audit or discovery requests. Messaging Reporter can also trace the path and disposition of any message. These forensic capabilities eliminate the costly, time-consuming efforts required in the past to retrieve messages.

#### Capacity Planning

The Messaging Reporter's actionable reports can detect email traffic trends to ensure organizations are prepared for an upswing in email activity. By monitoring traffic volume over time, IT departments can not only better manage budget and equipment expenditures, but also track the return on investment in tools they have purchased and intelligently plan for future growth.

## Centralized Management Reporting

### User Demographics

The Messaging Reporter can offer enhanced insight into how users use the email system, allowing administrators to secure and manage the email system more cost effectively, through actions like removing inactive accounts to prevent their use by spammers. Understanding the behavior of users and which users are using which services can also drive more effective investment in the platform.

### Consolidated Reports

The Messaging Reporter performs the previously labor-intensive task of combining reports from multiple edge devices, making reports more accurate and available in seconds rather than hours, and freeing up valuable technician time for other tasks. Consolidating data between two or more devices can help localize and understand root causes to problems and allow administrators to more easily identify and mitigate inbound and outbound spam activity.

### Minimum System Requirements

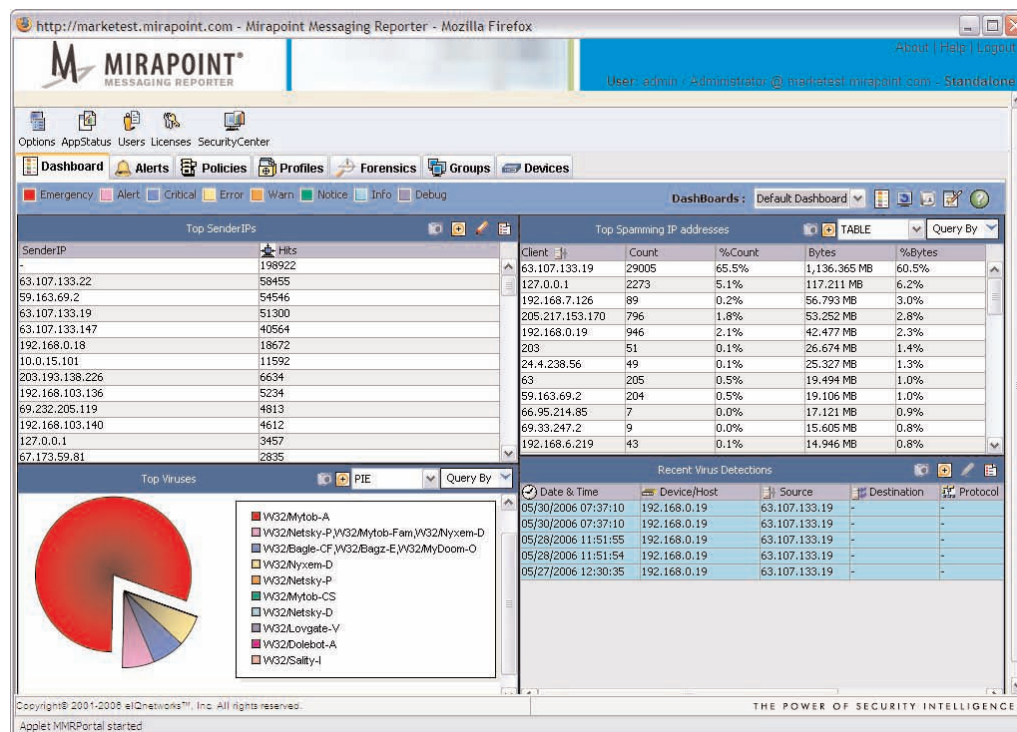

- Processor - Pentium 4, 2.8 GHz or higher
  - Disk Space - \*100 GB or higher
  - RAM - 2 GB or higher
  - Windows Server 2000 or 2003
  - Internet Explorer 6.0 with Java
- \*Disk space requirements depend upon the number of systems monitored and the volume of email traffic generated.

Mirapoint Messaging Reporter Dashboard provides up to date information to the administrator.

### About Mirapoint

Mirapoint® is the market leader in appliance-based solutions for secure message networks in enterprise, service provider, and education organizations, with more than 115 million mailboxes served and secured worldwide. Customers use Mirapoint appliances including the Message Server mail appliance and RazorGate mail security appliance to build the messaging infrastructure that intelligently serves, secures and manages email. Mirapoint is headquartered in Sunnyvale, California, with offices throughout North America, Europe and Asia. For more information on Mirapoint, visit its website at [www.mirapoint.com](http://www.mirapoint.com).
